

SINGLE LENS PROTECTIVE GLASSES COLORLESS POLYCARBONATE - 590-I

REF: 21109000000590ICX

Description:

The Climax 590-I clear goggles have been designed to provide effective protection against the risk of high-velocity, low-energy particle impact. In this way, the goggle is able to withstand the impact of small projectiles, such as wood, metal and plastic chips, pieces of stems and twigs that come loose when using gardening machines, etc. The velocity of the projectiles must be less than 45 m/s.

Its special design minimizes the angle of view to the side, and thanks to its optical neutrality and extreme lightness, it allows prolonged use without causing discomfort to the user.

The front is formed by the polycarbonate eyepiece itself. It has a wide bridge and nasal support plates. The side protection is configured as side extensions of the eyepiece itself.

The rods are of the spatula type, also made of polycarbonate and connected by plastic hinges that are fixed to the eyepiece by means of a metal screw that serves as a swivel system and is the only metal component of the protector.

Features:

- Protection F against the risk of high-speed, low-energy particle impacts
- Optical class: 2

Composition:

Polycarbonate

Colors:

Clear
