

MASK FOR HAND WELDER FIBERGLASS - 410 E

REF: 21114000000410ECX

Description:

The Climax 410 E welder's mask is designed to provide effective protection against radiation emitted during welding processes, as well as incandescent particles released during these processes. The mask is also recommended for protection against the impact of low-energy, high-velocity particles. Due to its design and dimensions, the shield covers the entire face and neck. Its lightweight design and ergonomic strap and the optical quality of the glass allow the user to work in comfort.

The body is made of black polyamide injection molded with fiberglass and has a flat front. The strap system consists of an ergonomically designed closed polypropylene strap that attaches to the inner front face.

The lens assembly consists of a cover lens, a filter lens and a support lens. All lenses measure 110 x 55 mm and are CE certified. The standard filter lens is shade 12, with a wide range of other shades available.

Harness Size: 52 - 61 cm

Weight: 415 g.

Composition: Mask: Polyamide / Polypropylene

Filter dimensions: 105 x 50 mm | 110 x 55 mm

Available filter shades: 9 - 13
